File Edit View

Explanation of each section

1. Header: Displays the title “Student Dashboard” and the welcome message.
2. Dashboard cards: Display three student details:
   - Attendance: 85%
   - CGPA: 8.5
   - Subjects: 6
3. Semester Results: Displays a table containing subject names, marks, and grades.
4. Announcements: Shows the message “Internal examinations begin next week.”
5. Footer: Displays “Student Academic Portal.”

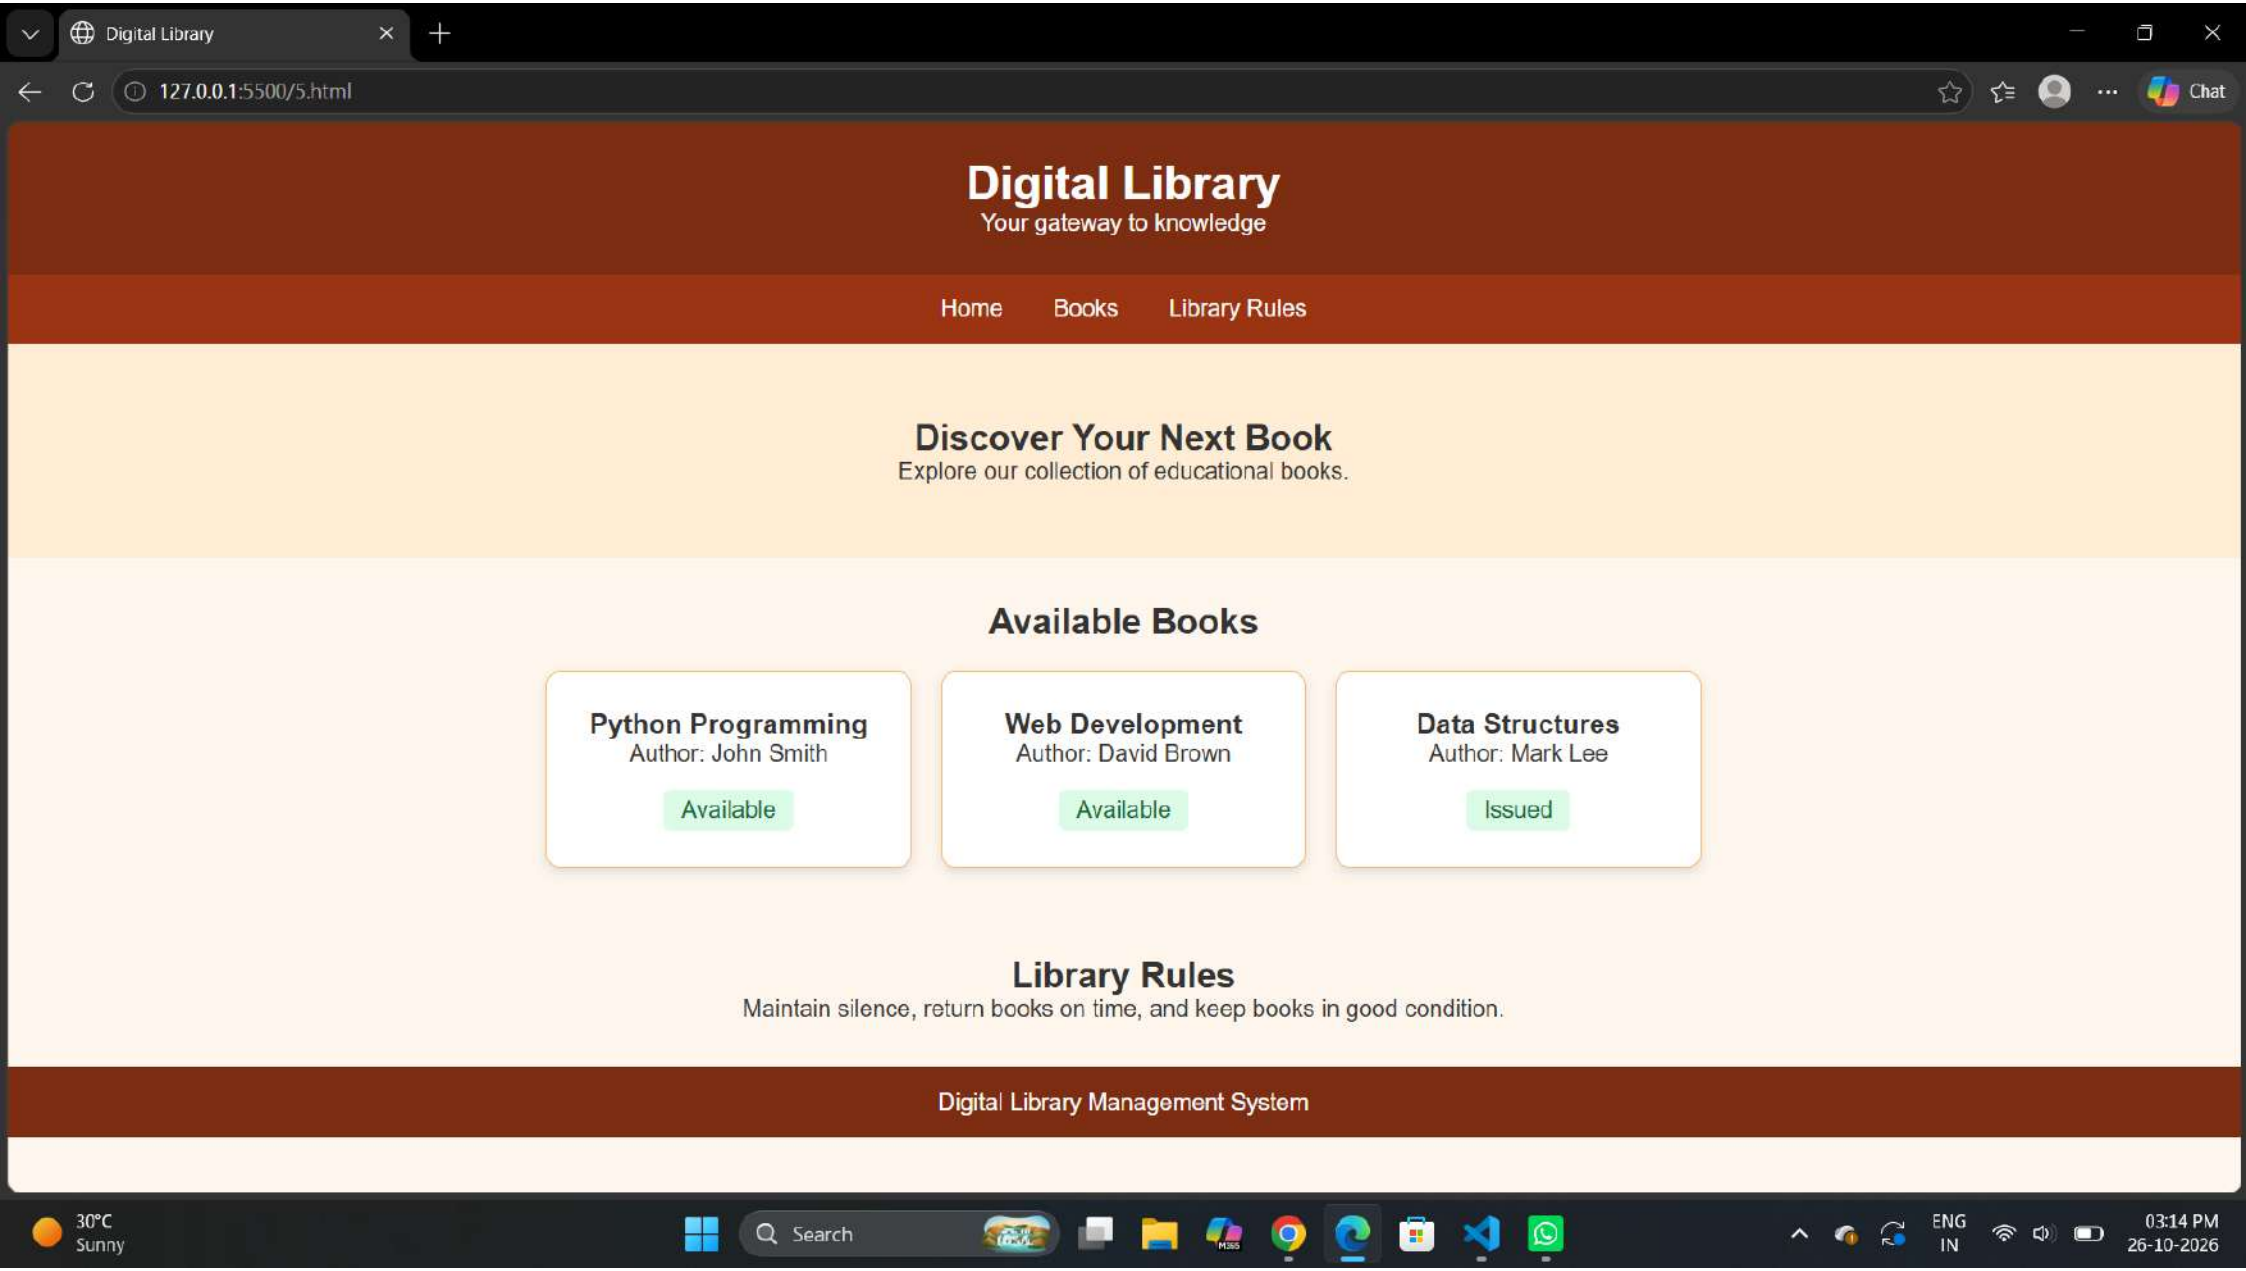

How HTML and CSS work together

- HTML creates the webpage structure, headings, cards, table, and announcements.
- CSS adds colors, spacing, borders, alignment, and styling.
- Flexbox arranges the dashboard cards in a row and allows them to wrap on smaller screens.
- Media query adjusts the section margins for screens with a width of 600 pixels or less.

Conclusion: The Student Academic Dashboard provides a simple interface for displaying student attendance, CGPA, subject details, semester marks, and college announcements. The displayed values are sample data, not information retrieved from a real student database.

WEBSITE-2 Explaination

exam1-6.py | fahrenheit.p | hello.py | Identity.py | IF ELSE.py | IF1.py | if-else 1.py | if-else 2.py | logical opera | membership | name.py | Nested if 1.p | program-31 | progra | Explan

File Edit View H1

1. Header: Displays the title “Digital Library” and the subtitle “Your gateway to knowledge.”
2. Navigation bar: Contains three links – Home, Books, and Library Rules. These links navigate to the corresponding sections of the same webpage.
3. Welcome section: Displays “Discover Your Next Book” and encourages visitors to explore educational books.
4. Available Books: Shows three book cards with book titles, authors, and availability status.
   - Python Programming – Available
   - Web Development – Available
   - Data Structures – Issued
5. Library Rules: Displays basic rules for maintaining the library.
6. Footer: Displays “Digital Library Management System.”

How HTML and CSS work together

- HTML: Creates the header, navigation links, book cards, library rules, and footer.
- CSS: Adds the brown and orange color scheme, spacing, borders, rounded corners, and shadows.
- Flexbox: Arranges book cards horizontally and wraps them onto new lines when the screen is smaller.
- Hover effects: Change the navigation link color when the user moves the pointer over a link.
- Media query: Adjusts the navigation links for smaller screens.

Conclusion: The Digital Library Management Interface is a webpage for displaying books, author information, book availability, and library rules. It is a static webpage, so searching for books, issuing books, and updating availability are not implemented.

WEBSITE-3 Explaination

fahrenheit.p hello.py Identity.py IF ELSE.py IF1.py if-else 1.py if-else 2.py logical opera membership name.py Nested if 1.p program-31. progra Explan Explan

File Edit View H1

Explanation of each section

1. Header: Displays the website name “Foodie” and the tagline “Delicious Food, Delivered Fresh.”
2. Navigation bar: Contains Home, Menu, and Contact links to navigate through the webpage.
3. Welcome section: Displays a welcome message and introduces the food ordering website.
4. Our Menu: Displays three food items:
   - Pizza – ₹199
   - Burger – ₹99
   - Biryani – ₹179
5. Food cards: Each card contains a food emoji, name, description, price, and an “Order Now” button.
6. Contact Us: Displays the restaurant's email address and opening hours.
7. Footer: Displays the copyright year and restaurant name.

How HTML and CSS work together

- HTML: Creates the food menu, navigation bar, food cards, prices, and contact section.
- CSS: Adds colors, backgrounds, spacing, rounded corners, and shadows.
- Flexbox: Arranges food cards in a row and allows them to wrap on smaller screens.
- Hover effects: Make the food cards move slightly upward and change the button background color when the pointer hovers over them.
- Media query: Makes the food cards fit smaller screens.

Conclusion: The Online Food Ordering Website provides an attractive interface for viewing food items, prices, and restaurant contact information. The “Order Now” buttons are only visual; actual food ordering would require JavaScript and/or a backend.
